- Lug-drive, floating rotor system eliminates rotor bolts, thread lockers, safety wire, and removes all thermally generated stress from a traditional hat for optimal pedal feel
- Choice of four or six piston front caliper kits for sanctioning body rules compliance
- “ST” series forged aluminum radial-mount calipers with Thermlock® pistons, internal damper springs, and Type III Mil-Spec hard anodize finish for maximum heat control, consistent pedal height and long-wearing abrasion resistance

- 14.00” SV/GT series staggered 72 curved vane **Spec37** alloy front rotors deliver the highest degree of thermal stability and cooling efficiency

- 13.06” GT series 48 curved vane **Spec37** rear rotors

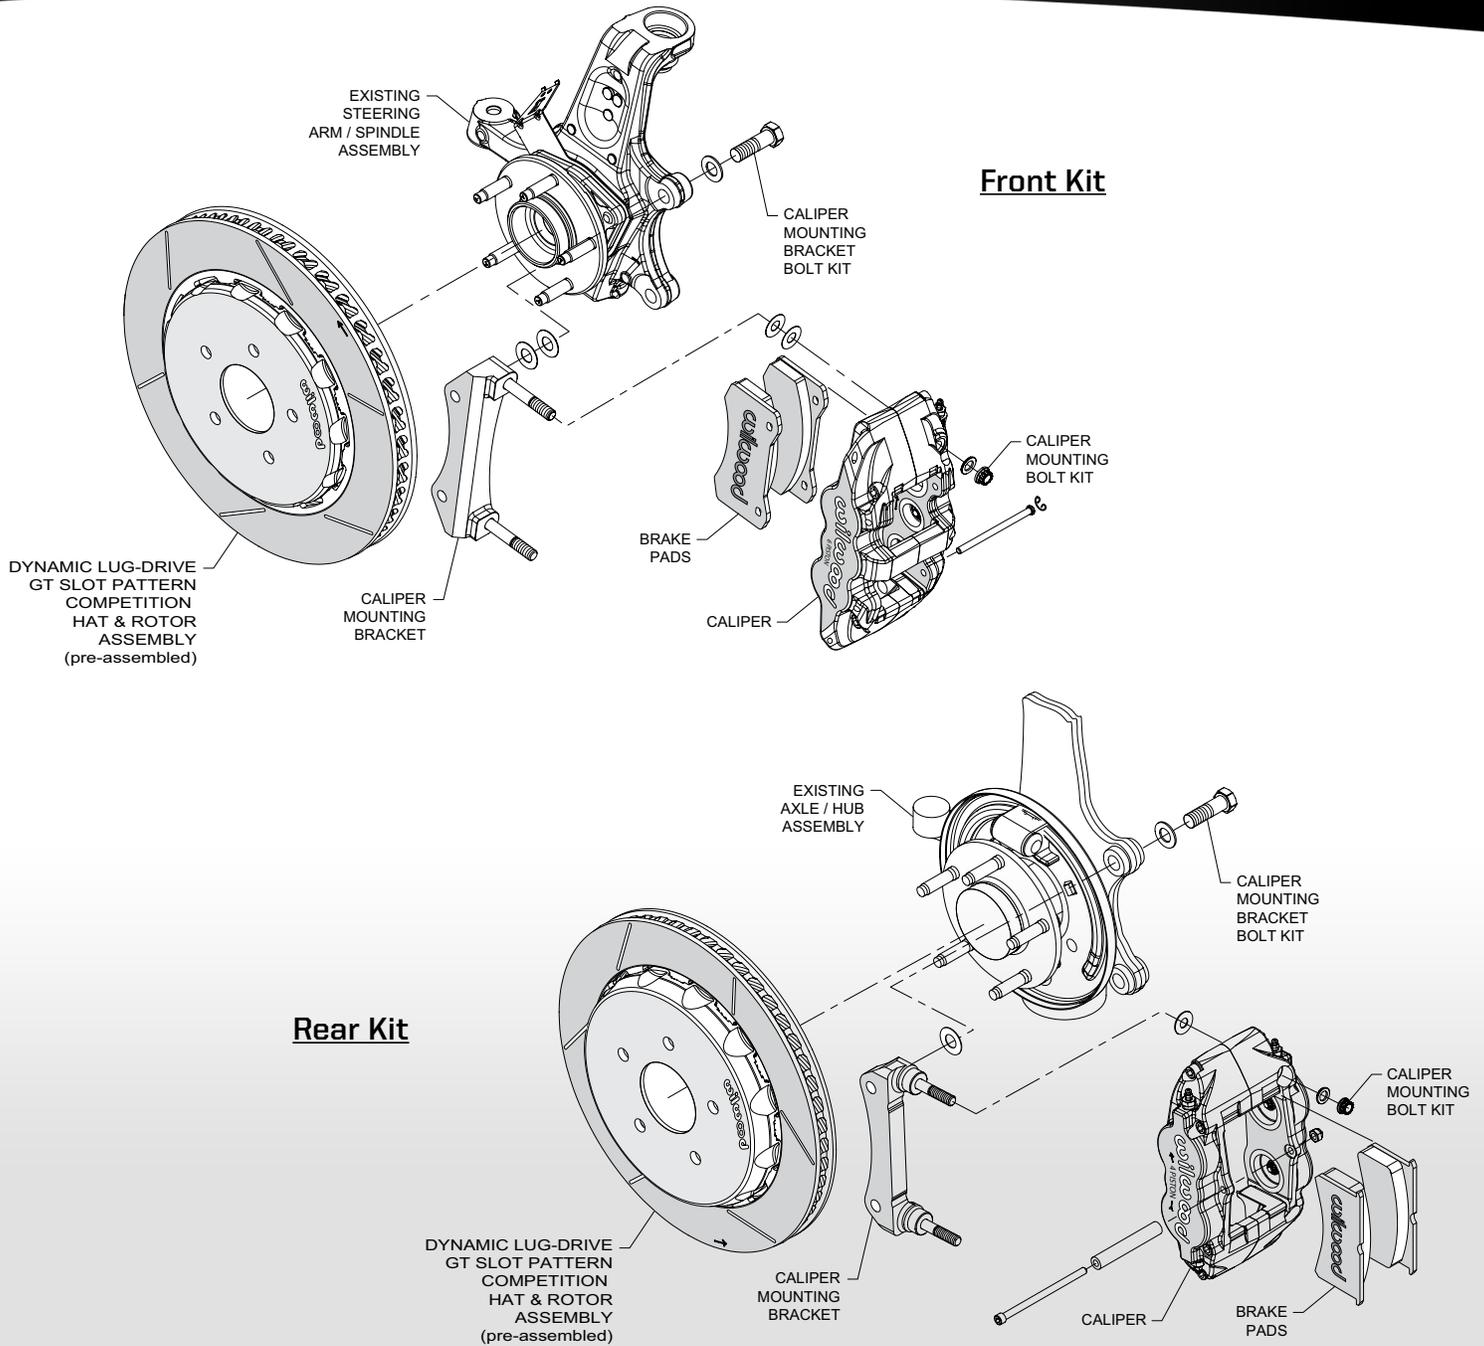

- Hard anodize rotor mounting hats include replaceable stainless steel wear plates for extended service life

- BP-30 race compound **SmartPads**

### Lug-Drive Hat & Rotor System

- Single, stainless steel snap-ring retention accommodates new rotor replacement in under a minute
- Dynamic rotor mounting allows independent movement of the rotor and hat through heat cycles to remove distortion-induced stress at the mounting points
- Rotors stay flatter and run truer creating smoother, vibration-free performance
- Rotors with hats shipped pre-assembled in kits
